ABSTRACT

This report presents statistics on Oregon's reserve pool of teachers (those certified to teach but who are not currently employed in a teaching position) as of March 1986. Information is given on the number of teachers, and in some cases, the percentage of the reserve pool, under the variables of: (1) sex; (2) age; (3) location by state (holding Oregon certification); (4) location within Oregon; (5) endorsement areas; (6) sex by age; (7) age by location in Oregon; and (8) endorsement area by location. A summary of findings and recommendations for further study of the Oregon reserve pool are included. Complete data tables are appended. (JD)

Appendix A: Complete Data Tables

INTRODUCTION

Teacher supply and demand is a topic of study in virtually every state in the nation because of real and projected shortages of teachers in many states. The supply of teachers in Oregon, those actively seeking a teaching position at any given time, is typically composed of six contributing groups:

1. People entering the teacher pool newly graduated from Oregon college and university teacher preparation programs.

2. People who move to Oregon from other states newly graduated from a college or university teacher preparation program.

3. Teachers currently employed in a school in Oregon who are seeking a teaching assignment in another school in Oregon.

4. Teachers currently employed in a school outside the state who are seeking a teaching assignment in Oregon.

5. People who are able through nontraditional means to enter the supply pool in shortage areas, i.e., college graduates who are able to pass subject matter tests and complete a period of successful teaching in a school (soon to be implemented by the Teacher Standards and Practices Commission).

6. People who are certified to teach but who are not currently employed in a teaching position.

It is this latter group of people that comprise what is commonly called the reserve pool and which is the subject of this present report.

RESERVE POOL

As attention has focused nationally on present and projected shortages of teachers in many states, efforts have been made to improve statewide supply and demand studies. A new dimension of many of these studies has been the addition of estimates of the number out of the reserve pool that could enter teaching in response to teacher shortages.

In reviewing reserve pool studies from different states it is important to note that reserve pools are configured differently in different states. In some states teachers are granted a lifetime certificate. Teachers in these states are not required to go through a periodic renewal process to keep a current certificate to teach. California uses the lifetime certification process. The reserve pool in a state with this type of certificate will typically be quite large, made up of many people who are no longer interested in becoming employed as a teacher.

In some states certification is a time-constrained process. Teachers in these states must renew their certificate on a periodic basis, meeting requirements

that are set by the state to complete the renewal process. Oregon is a state using the time-constrained certification process. Teachers who do not complete requirements established by the Teacher Standards and Practices Commission (for example, teaching one out of every three years or completing a certain amount of college credits in their teaching area) will not be allowed to renew their certificate. The reserve pool in a state like Oregon will be much smaller than a state using the lifetime certification process because the pool in a time-constrained certification state is composed of only those people who are actively involved in the profession periodically, and through such means, able to keep their certificate current.

Comparing the size of the reserve pool in one state to the size of reserve pools in other states, therefore, may be difficult and often misleading. In understanding teacher supply and demand, it is important to keep the reserve pool population well in mind. We must identify those people who are currently certified to teach and those people who once held a teaching certificate but who have let their certificate lapse; without much difficulty this latter group could become recertified to teach.

Oregon's supply and demand studies have never incorporated projections of the number of the reserve pool that are entering the active job seekers for teaching positions each year because no data have been available on the size of the reserve pool.

During 1985, a study of the reserve pool was authorized under the auspices of the Joint Boards' Committee on Teacher Education in an effort to add this information to our understanding of the supply and demand situation in Oregon. The purpose of this report is to summarize the findings of Phase One of the study.

STUDY DESIGN

Phase One

The study examined the currently certified reserve pool on the assumption that this is the group of people most likely to re-enter the profession by virtue of their consistent efforts to keep their certificates current. There are also numerous people in the state who once were certified to teach who have let their certificate lapse. These people could re-enter the teaching profession without much difficulty, typically taking nine college credit hours. Because of the difficulty in getting data on this group from TSPC files (past certificate holders are maintained in microfiche not computer files) this group was not included in the study.

During Phase One of the study, therefore, two separate data bases were matched to identify a currently certified reserve pool list. One data base contained all employes regularly employed by the state's public school districts, i.e., part- and full-time employes. This data base, compiled annually by the State Department of Education, contains some 33,000 employes.

A second data base contained all people currently certified by the Teacher Standards and Practices Commission. This data base, updated regularly by TSPC, contains some 55,000 certificate holders.

In order to identify people in the reserve pool, the SDE data base was matched with the TSPC data base so that current certificate holders were identified on the SDE list (i.e., found to be employed) and then set aside. Left was a list of current certificate holders who were not employed in an Oregon public school. This became the reserve pool population available for our study.

Oregon's certified reserve pool list was submitted to a descriptive statistical analysis for the following variables:

Variable	Descriptors
Sex	Female, Male, Unreported
Age	Less than 26, 26-30, 31-35, 36-40, 41-45, 46-50, 51-55, 56+, Unknown
Location by State	Oregon, Washington, Idaho, California, Alaska, All Others
Location Within Oregon	Portland and Northwest Oregon Midwestern Oregon (includes Salem, Corvallis, Albany, Newport) Southern Willamette Valley/Coast (includes Eugene/Springfield) Medford and Southwest Oregon Klamath Falls and South Central Oregon Bend/Central Oregon Pendleton, La Grande and Northeast Oregon Southeast Oregon
Endorsement Areas	Basic Math Advanced Math Biology Physical Science Integrated Science Language Arts Elementary, Five Year Elementary Physical Education Social Studies Music Special Education Administration Vocational Foreign Languages Five Year Secondary Counselors, Psychologists, Supervisors All Others

Phase Two

A second phase of the study has been proposed in order to learn more about the reserve pool's reasons for not being employed in a public school position and

to make some projections about the number that are considering, or would consider, re-entering the profession in the years to follow. It was proposed that a survey of a sample of the entire population be carried out, pulling address labels off for an estimated 2,000 people from the reserve pool list.

REPORT OF FINDINGS

Number in the Reserve Pool

A total of 29,044 people currently make up Oregon's certified reserve pool.

Sex

Because the TSPC data base does not require individuals to identify their sex, sex designation was unreported for 62 percent of the reserve pool population. It is assumed, however, that where individuals did identify their sex, this was done on a representative basis and that an estimate of female/male breakdowns can be done based on the 10,947 individuals for whom sexual identity is known. The reserve pool is estimated to be composed, therefore, of 72 percent females and 28 percent males.

Sex	Number
Female	7,836
Male	3,111
Unreported	18,097
Total	29,044

Age

Slightly more than half, or 51 percent, of the reserve pool are under the age of 41. Almost one-fifth of the reserve pool or 19 percent are 56 years or older.

Age	Number	Percent
Less than 26	1,118	3.8
26 - 30	3,701	12.7
31 - 35	4,629	15.9
36 - 40	5,383	18.5
41 - 45	4,186	14.4
46 - 50	2,622	9.0
51 - 55	1,969	6.8
56 or above	5,221	17.9
Unreported	215	.7
Total	29,044	

Location by State

The majority of people in the reserve pool, or 89 percent, live in Oregon. Some 3,200 of the reserve pool live outside the state, keeping their Oregon certificate current.

The states in which the largest percent of out-of-state residents are living are Washington and California. It is estimated that some of the people residing outside the state are employed as teachers in their resident state inasmuch as keeping a certificate current requires a person to teach at least one year in three or take a required amount of college credits during that period of time.

State Residing In	Number	Percent
Oregon	25,824	88.9
Washington	898	3.1
California	743	2.6
Idaho	299	1.0
Alaska	175	.6
All Others	1,105	3.8
Total	29,044	

Location Within Oregon

Almost half of the current certificate holders who reside in Oregon, or 46 percent, live in the Portland area, and 81 percent live in the Portland to Eugene corridor. The breakout by areas within the state are as follows:

Areas Within Oregon	Number	Percent
Portland/Northwest Oregon	11,789	46
Salem/Albany/Corvallis	4,898	19
Eugene and Surrounding Area	4,415	17
Medford/Southwest Oregon	1,805	7
Klamath Falls/South Central	498	2
Bend/Central	870	3
La Grande/Pendleton/Surrounding	1,289	5
Southeast Oregon	260	1
Total in Oregon	25,824	

Endorsement Areas

In compiling statistics on the number of people in the reserve pool by endorsement areas, it is important to note that many people are endorsed in multiple areas. This means that the total number of people in the population, when counted by endorsement areas, will be significantly higher than the total number of people when counted by social security number.

Over one-third of the reserve pool population or 37 percent, are certified as elementary teachers, with substantial numbers in Social Studies (4 percent), Physical Education (5 percent), Language Arts (4 percent), and Special Education (7 percent). The breakouts are as follows:

Endorsement Areas	Numbers	Percent
Basic Math	245	.69
Advanced Math	560	1.59
Biology	558	1.59
Physical Science	211	.59
Integrated Science	399	1.13
Language Arts	1,356	3.85
Elem./5-Yr. Elem.	13,161	37.42
Physical Education	1,653	4.70
Social Studies	1,513	4.30
Music	798	2.27
Special Education	2,510	7.14
Administration	1,235	3.51
Vocational	478	1.36
Foreign Languages	152	.43
5-Year Secondary	4,224	12.00
Couns., Psych., Etc.	819	2.32
All Others	5,300	15.07
Total	35,172	

Sex by Age

Further analysis of the age of certificate holders by sex indicates that the reserve pool is dominated by females at the younger end of the age groupings, with a marked increase in males in the older groupings of the reserve pool.

	Female		Male			
	No.	%	No.	%	Total	Unreported
26 or less	651	82	145	18	796	322
26 - 30	1,118	74	391	26	1,509	2,192
31 - 35	1,307	73	494	27	1,801	2,828
36 - 40	1,656	73	599	27	2,255	3,128
41 - 45	1,236	72	473	28	1,709	2,477
46 - 50	738	72	288	28	1,026	1,596
51 - 55	435	66	228	34	663	1,306
56 or older	681	58	487	42	1,168	4,053
Age Unreported	14	-	6	-	20	195
Total	7,836	78	3,111	28	10,947	18,097

Age by Location in Oregon

Analysis of the age of people in the reserve pool by location in Oregon indicates that people nearing retirement age (56 or above) are distributed throughout the state with slightly higher than average retirement-age percentages in the Portland area, Medford/southern area, Klamath Falls/south central area, and southeastern area.

Location	No. of People 56+	Total No. In Area	Percentage
Portland/Northwest Area	2,384	11,789	20.0
Salem/Albany/Corvallis	885	4,898	18.0
Eugene/Springfield Area	850	4,415	19.0
Medford/Southwest Oregon	360	1,805	20.0
Klamath Falls/South Central	108	498	22.0
Bend/Central Oregon	138	870	16.0
Pendleton/La Grande/Northeast	228	1,289	18.0
Southeast	53	260	20.0
Total	5,006	25,824	19.0

Endorsement Area by Location

Analysis of the people in the reserve pool by endorsement and location in Oregon indicates that in the high demand areas of math, sciences, special education, and counseling there are people in the reserve pool in virtually all areas of the state. The numbers in math and sciences, however, are quite small in the rural areas of the state.

	Basic Math	Adv. Math	Phys. Sci.	Integr. Sci.	Special Education	Counseling Psychol.
Portland/NW Area	79	208	74	126	953	285
Salem/Albany/Corv.	60	117	44	88	510	147
Eugene Area	24	78	19	61	368	142
Medford/SW Area	21	36	12	25	106	52
Klamath Falls Area	5	10	4	10	34	12
Bend/Central Area	5	10	5	18	37	23
Pendleton/NE Area	26	19	5	18	99	32
Southeast Oregon	0	2	1	8	9	8
Total	220	480	164	354	2,116	701

SUMMARY OF FINDINGS AND RECOMMENDATIONS FOR FURTHER STUDY

* The majority of people in the reserve pool are under 41 years of age, indicating that they could contribute to the supply pool for the next 10 to 20 years. Some 5,200 people in the reserve pool, however, are already 56 years of age or older with many already retirement-age. Further study should examine the likelihood of people in the 56+ age group actively seeking a regular teaching assignment in Oregon public schools.

* The reserve pool has over 3,200 certificate holders residing in other states. The fact that these people continue to renew their Oregon certification could indicate that some may choose to return to the state if a teaching position becomes available. It is likely, however, that many of these people have re-established themselves in another state and have little intention of returning to Oregon. Further study should examine the likelihood of out-of-state Oregon certificate holders actively seeking a teaching position in Oregon in the near future.

* The majority of people in the reserve pool are women. Many women in the -26 to 40 age groups may be taking time off from their profession to raise families. Further study should examine the possibility that many women in the reserve pool are "stopping out" with the intention of returning to their profession in future years.

* The reserve pool has a large number of people in Oregon's current shortage areas of math, sciences, special education, and counseling. It is hypothesized that many of these people are otherwise employed and/or not interested in school employment at this time. Further study should examine the present employment situation of people in high demand areas, particularly looking at the likelihood of people in these groups actively seeking a regular teaching assignment in Oregon public schools.
